OVERVIEW

Brad is the co-chair of Marshall Dennehey's Product Liability Practice Group and concentrates his practice on the defense of complex product liability and fire cases for small, medium and large (Fortune 500) manufacturing companies and their distributors. He defends the manufacturers of tools, electrical components, scaffolding and lifts, tires, paint, automatic doors, machinery, backhoes and other heavy industrial equipment. He also defends manufacturers of complex heat exchangers, chemical pumping systems and other industrial systems.

Brad is national counsel to a company that designs and manufactures thermal fluid heaters and boilers. His background in fire fighting has given him additional insight into the defense of cases on behalf of manufacturers of electrical components, electricians and others alleged to have started fires.

Brad is a supervising attorney in the firm's Product Liability Practice Group. As such, he fields questions from attorneys throughout the firm regarding substantive legal issues relating to product liability. Brad manages associates in the development of their practices

Brad is a nationally certified firefighter, who serves the Penn Wynne/Overbrook Hills Fire Company (Lower Merion Fire Department) as both a firefighter and its president. Brad holds over 60 different fire and rescue certifications.

He has authored six treatises on Pennsylvania Products Liability law along with numerous other articles for a variety of publications. He has been a guest lecturer at a number of legal conferences as well as Temple University, Drexel University and The University of Wisconsin.

RESULTS

Summary Judgment Obtained in House Fire Case

Product Liability

February 21, 2025

We obtained summary judgement on behalf of a homeowner in a 10-plaintiff negligence action arising from a house fire. In granting summary judgement, the Philadelphia Court of Common Pleas agreed that the plaintiffs' failure to secure a cause and origin expert was fatal to their case as the fire was alleged to be electrical in nature and, thus, outside the purview of the average juror.

Denial of nationwide and Pennsylvania-wide class certification affirmed.

Product Liability

Class Action Litigation

Appellate Advocacy & Post-Trial Practice

December 2, 2021

Our attorneys prevailed on an appeal to the Third Circuit, which affirmed the district court's rejection of the plaintiffs' request for class certification in a product liability and warranty action. The named plaintiffs are several property owners and communities of common ownership who allege they have yellow-jacketed, corrugated stainless steel tubing (CSST) transporting natural gas through their structures. The flexible, yellow CSST is the modern heir to the black iron pipe formerly universal in the building industry.

SIGNIFICANT REPRESENTATIVE MATTERS

Defense of manufacturer of industrial power press which amputated fingers of 32-year-old female plaintiff. The plaintiff alleged defective design of a power press used for stamping metal components. The plaintiff was operating the press as she had been taught by her employer. She reached into the press to remove a stamping when the press made an unintended cycle, crushing her hand. At trial we were able to prove that faulty repairs made to the press by the employer are what caused the repeat cycle rather than the original design of the press. Defense verdict.

Defense of manufacturer of complex heat exchanger which was alleged to have caused an explosion at an explosives plant in the northern desert of Chile. The heat exchanger was manufactured in New Jersey, shipped through the Panama Canal to the Pacific and then south to the plant which was located in Mejiones, Chile. Extensive discovery both in the United States and in Chile revealed the cause of the failure was the chemical content of the water being used at the plant. The plant's water treatment facility failed to bring the chemical content in the feed water to within the limits called for in the system specifications. The case was dismissed prior to trial.

Represented the manufacturer of an AC motor in bathroom fan/light fixture alleged to have started a fire and destroyed a restaurant. The plaintiffs alleged the fixture was defectively designed. Through forensic examination of the remnants of the fan/light fixture and its internal components, as well as the burn patterns left in the area of the fire, we were able to prove the fixture did not cause the fire. Defense verdict.

Defense of electrician whose work was alleged to have started a fire. Client was called out to do electrical work in a building on an emergency basis. The electrician ran wires through a drop ceiling and was alleged to have nicked a part of the wire on the metal struts. The exposed wire allegedly ignited the surrounding combustibles, starting the fire. The fire was discovered five hours after the electrician left the premises. We were able to establish by a thorough examination of the wiring and the fire scene that the origin of the fire which was approximately 40 feet from where the client did his work. Defense verdict.

Defense of manufacturer whose delivery driver was responsible for an auto accident. The plaintiffs were a mother and daughter who were allegedly injured when a van operated by the delivery driver struck their vehicle broadside. Mediation occurred and our client offered what the mediator recommended. The plaintiffs rejected the offer, and the case was tried. Liability was conceded. Verdict was 17 percent of pretrial settlement offer.

Defense of manufacturer of automatic pedestrian door which allegedly knocked a woman down. Careful analysis of the accident and the plaintiff's design claims were rebutted by expert testimony. Defense verdict.

Represented tire manufacturer in case where a tire with 3,000 miles on it blew out. We were able to establish that the cause of the tire blow out was a puncture of the tire, which occurred when the plaintiff ran over a nail and not due to any defect with the tire. Defense verdict.

Dismissal prior to trial on behalf of the manufacturer of power strip which allegedly caused a house fire. Through careful examination of the remnants of the power strip and exemplar power strips, we were able to show that, while close, the internal components were dissimilar enough that the alleged manufacturer was not the actual manufacturer of the allegedly defective strip.

Obtained summary judgement on behalf of a homeowner in a 10 Plaintiff negligence action arising from a house-fire. In granting summary judgement, the Philadelphia Court of Common Pleas agreed that Plaintiffs' failure to secure a cause and origin expert was fatal to their case, where the fire was alleged to be electrical in nature and thus outside the purview of the average juror.
